

Long-term Care

At A Glance:

Functionality:

- Flexible Billing Options
- Integrated Database
- Customizable Forms
- Cycle Fill
- Quantity Entry
- Automation Integration

Benefits:

- Increase Efficiency
- Boost Profitability
- Advance Manageability
- Enhance Patient Care

As the elderly population continues to grow, pharmacies need a simple yet flexible solution for serving the specialized needs of skilled nursing, assisted living, and group homes. By utilizing our Long-term Care (LTC) module in conjunction with Pharmaserv[®], pharmacies can service both retail and long-term care facility customers simultaneously, while providing significantly improved customer service.

An integrated system with shared prescription processing, patient and physician records, price, inventory and item maintenance, and with multiple billing options, means you can add revenue by adding new business without having to expand your operations. Long-term Care is simple to integrate and, with its easy-to-use graphical interface, you can be productive in no time.

MCKESSON

Empowering Healthcare

About MPS

With a wide array of solutions that **provide superior performance, functionality, and world-class support**, our complete portfolio can aid the entire pharmacy.

Depending on individual business needs, a pharmacy management system along with its underlying platform can be chosen that will best address key drivers. Our cutting-edge technology solves the needs of community, chain, hospital, clinic, and long-term care pharmacies in all 50 states.

McKesson Pharmacy Systems

30881 Schoolcraft Road
Livonia, MI 48150

Benefits

Increase Efficiency

- Eliminate double entry and improve accuracy with a shared access patient database for maintenance of patient and physician records, price management, item maintenance and inventory
- Avoid the need to manually update inventories based on returned medications with Quantity Entry

Cycle Fill helps balance the pharmacy workload by automatically creating new dispenses for LTC prescriptions based on the distribution schedule of the facility. It can determine the dispense quantity based on the number of days in the cycle and the dosage per day.

- Frees pharmacy staff from creating refills individually with Cycle Fill's streamlined dispense process

Boost Profitability

- Save expense by utilizing Quantity Entry to defer billing of specified medications until cycle end which enables billing based on actual usage and can reduce claim transactions
- Manage cash flow with flexible billing options for third party payers, private charge accounts and direct facility billing that have automatic ties to invoicing and Accounts Receivable

Advance Manageability

Let the facility become the focal point for prescription processing, dispensing, billing, and administering medications. Patient records can be assigned to a facility, building, unit, station or individual bed. Flexible unit dose time schedules are available along with packing lists, labels, and Medication Administration Records (MARs).

Seamless automation interfacing is another benefit to our LTC module, which easily integrates with:

- PACMED
- Medicine-On-Time®

Enhance Patient Care

Long-term Care improves the quality and integrity of patient care by providing ready access to DURs, MARs, Physician's Orders and Plans of Care reports and forms. Hours of Administration are provided by facility or by specific location within the facility, ensuring the flexibility necessary for personalized patient care.

You can even assign special patient consultation notes and commentary, bringing the pharmacy and the facility together to ensure excellence in patient care.
