

# Horizon Cardiology™ Hemo

## Benefits

- Simultaneous nurse and technologist documentation without limitation
- Functionality that enables the physician to finish the report before the patient leaves the room
- Integrated comprehensive congenital support
- Integrated FFR including documentation
- Multimodality imaging and ECG fully integrated within the hemo
- Hemo data that is instantaneously available in the final physician report, without an interface
- Intuitive user interface that improves usability and reduces button clicks

How can you achieve streamlined workflow in the cath lab, eliminate repetitive data entry and share images and information in a single system? By implementing the integrated hemodynamic monitoring system from McKesson — Horizon Cardiology™ Hemo.

Patient demographics, medication information, hemodynamic waveforms, fractional flow reserve (FFR) measurements, images and procedural information all flow seamlessly into one complete patient record. The result — repetitive data entry is eliminated and information is intuitively accessible from any location.

Horizon Cardiology Hemo supports patients of all ages using unique parallel workflows to deliver a modular solution with complete flexibility to address your particular workflow and needs. The single database and the resultant

parallel workflows improve physician adoption of structured reporting by overcoming the perception that dictation is faster.

Integration in the cath lab is complete, workflow is simplified, and efficiency and cost-effectiveness are optimized.

## Fully Integrated Cath Lab

Horizon Cardiology Hemo is a comprehensive hemodynamic monitoring and information management application for the cath lab. This application can exist on its own or seamlessly integrate with the Horizon Cardiology™ Nurse Charting Solution and Horizon Cardiology™ Holding Area Charting™. The entire solution delivers an intuitive user interface to collect and display waveforms, hemodynamic data, procedural data and signatures that automatically populate the final physician report.

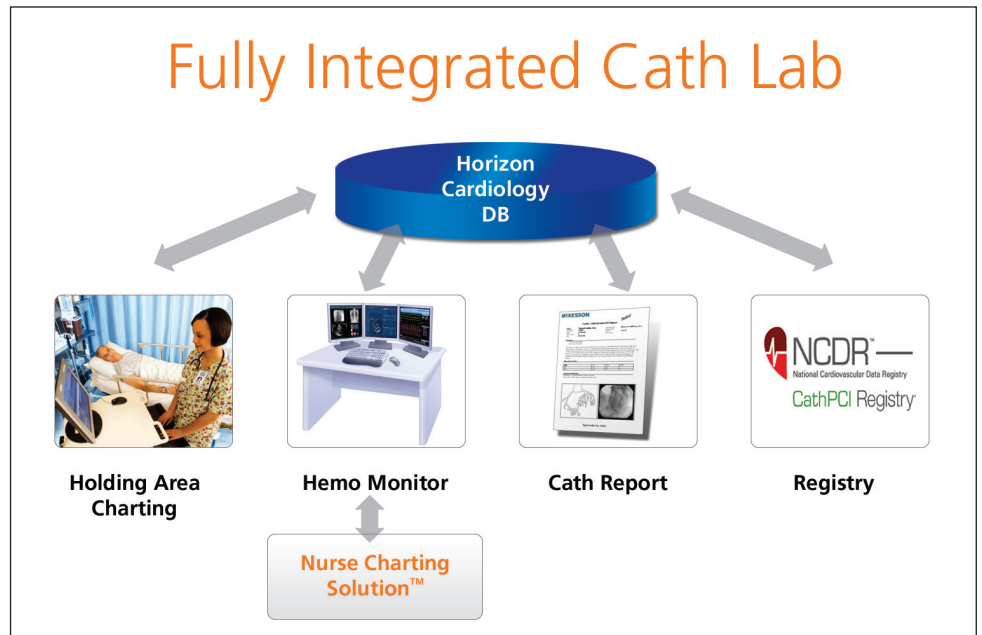

The solution offers an intuitive user interface for performing the FFR measurement as easily as any other measurement.

## Features

- Hemodynamic monitoring and analysis modules
- Real-time procedure notes charting
- Real-time customizable vitals charting, including pain status, medications and conscious sedation
- Fully integrated FFR support
- Customizable patient demographic forms and procedural data forms
- Final hemodynamic report in PDF format, including all data gathered during the procedure
- Full disclosure reporting and playback for improved support and research
- Full vitals acquisition and recording
- Adult, pediatric and neonatal group definitions for age-related configurations

## About Horizon Cardiology

Horizon Cardiology, a cardiovascular information solution (CVIS) from McKesson, enables you to improve quality of care, boost efficiencies and reduce costs while increasing physician and staff satisfaction. The system's unique parallel workflows are the key to improving the adoption rate of structured data reporting for cardiac and peripheral catheterization, hemodynamics monitoring, echocardiography, vascular ultrasound, nuclear cardiology and

ECG management. The single database design of Horizon Cardiology overcomes the perception that dictation is faster than structured reporting. The physician starts with a report that has up to 90% of the data already present. In addition, the new, innovative Charge Manager module improves efficiency and accuracy by automatically capturing charges from the normal procedure documentation. The unique parallel workflows of Horizon Cardiology bring together the clinical information required for better and safer decisions in patient care.
