

AcuDose-Rx

Key Benefits

- Optimize medication inventory and put an end to stockouts
- Maximize your technology investment—with progressive software upgrades and a cabinet engineered to last
- Protect your investment with world-class service and support
- Support on-the-go nurses with fast, intuitive workflow
- Choose from among the most flexible, cost-effective storage options to balance safety and accessibility

Put an End to Costly Stock Outs

McKesson's all-new AcuDose-Rx® automated dispensing cabinets ensure nurses always get the medications they need right away. So, pharmacy gets fewer calls from nurses, freeing pharmacy technicians for more productive work. Medication inventory is optimized for each cabinet using McKesson's exclusive RightStock™ system, which cuts down on stock outs and reduces inventory costs. Drawers and pockets hold the right amount and variety of medications to manage inventory more efficiently. Plus, the durable, jam-resistant drawers ensure easy access every time, and the built-in monitoring system provides early warning to avoid potential breakdowns.

Green arrow indicators guide users to the correct storage location.

The RightStock System

The RightStock™ System builds on McKesson's inventory management expertise. Available exclusively with AcuDose-Rx cabinets, RightStock automatically optimizes cabinet inventory, reduces expired medication rates, and puts an end to stock outs. The system combines intelligent features that enable you to:

- monitor and dynamically adjust inventory levels based on historical or peak usage, per med and per cabinet
- prevent potential stock outs before they happen with automatic re-order triggers
- set restock frequency based on your needs
- ensure permanent medications remain available in each cabinet

Nurses Get Meds Quickly, While Pharmacy Oversight Improves

Nurses prefer the new, intuitive AcuDose-Rx cabinet workflow that requires fewer touches and gets them in and out of cabinets fast, so they have more time for patient care. Meanwhile, AcuDose-Rx cabinets integrate the systems, service, and support needed to keep the medication-use process running smoothly—at a manageable cost that fits within your long-term strategic vision.

Tab View Navigation. Nurses will quickly find what they need because smart tabs organize patient medications into Scheduled, STAT, PRN, and All Orders views.

Dispense By Time. This exclusive feature—through integration with the clinical order—enables nurses to view actual medication due times. Not only is this the safest method for dispensing scheduled doses, but nurses can better organize patient med passes safely and on time. This feature is ideal for patients with irregular dosing schedules.

Closed Loop Administration. Available exclusively in AcuDose-Rx, both nursing and pharmacy for the first time will have an accurate record of when a patient's medications are dispensed from a cabinet and when they are administered. This feature is enabled by cabinet-to-bar-code medication administration system integration.

FastEntry™ Biometrics. This single-touch, secure logon lives up to its name because no secondary ID—password or ID badge scan—is necessary. Plus, you can enroll multiple fingerprints for each individual.

Robust Reporting. Report generation just got simpler. More than 70 standard reports are ready to run out of the box from any networked station. Re-run common reports without re-entering all parameters, and use everyday terms (“last 7 days”, “yesterday,” etc.) to quickly enter dates.

Flexible Storage. AcuDose-Rx offers the smartest choices for storing medications, with multiple options to address patient needs while balancing safety, accessibility and economy. Each AcuDose-Rx main cabinet accommodates up to 15 drawers—the most on the market—with three security levels. In fact, AcuDose-Rx has room for more secure line items than any other cabinet. Plus, you get added flexibility with the widest variety of drawer sizes and storage pockets available.

Most Integrated Cabinet. AcuDose-Rx is powered by the same, versatile Connect-Rx® software platform that drives all McKesson pharmacy automation solutions, and which interfaces with McKesson Horizon and Paragon systems, plus more than 90 pharmacy information systems.

Maximize Your Technology Investment

McKesson helps you keep pace with technological advances while protecting your investment over time.

- Premium implementation services make for a smoother transition for pharmacy and nursing.
- U.S.-made from durable steel, AcuDose-Rx cabinets feature jam-resistant drawers, and are engineered to outlast the competition.
- Your cabinet investment is protected by certified Support Center Practices (SCP), U.S.-based support, 24x7x365, whenever you need it.
- Get unprecedented flexibility and scalability in monitoring temperatures of rooms, refrigerators, freezers, incubators, and more—across the hall or across the campus.
