The chain pharmacy has an additional layer of complexity as compared to its single store counterpart. To attain a high level of business performance, chains need systems that integrate data across multiple locations with simplified controls for centralized administration. McKesson Pharmacy Systems offers this and more with its chain specific solution.

Chain Host is a flexible, comprehensive tool for the administration and allocation of processes and data across a multi-store environment. Built-in security provides a flexible management tool to apply store-level control centrally or to selectively grant specific access to individual store personnel. As a result, Chain Host improves enterprise-wide efficiency and manageability, while simultaneously providing a framework to deliver enhanced patient care.

### Drive Performance

Chain Host supports a blend of centralized and store-based activities with flexible, role-based administration to provide the fluidity necessary to react to your changing needs.

- Move claim reconciliation and payment receipts to headquarters to ensure timely and accurate reconciliation and payment collection
- Gain insight into the key variables impacting store performance and profitability with flexible reporting capabilities
- Schedule reports to generate automatically and export into various file formats for easy reference

### Increase Efficiency

- Stay productive by allocating item, carrier, or price maintenance to headquarters, regional specialists, or individual stores based on fluctuations
- Reduce inconsistencies in patient data via continuous updates to the patient information file, including Address, Phone, Allergy, & Medical Conditions

- Save time with ePayment to review and post electronic claim batches from a single window

Speed up record keeping and decrease data entry with the ability to:

- Add patient information in one click
- Automatically transfer multiple patient prescriptions

### Maximize Profitability

- Optimize margins by selectively varying price on certain items across a store or group of stores depending on local demand
- Respond quickly to market fluctuation with rapid price change implementation
- Control generic selection from headquarters to ensure revenue gains
- Compare and analyze store volume, productivity ratios, key performance measures and profit margins

### Optimize Patient Care

- Provide enhanced patient safety by viewing and screening the patient's entire history from all pharmacies within the chain
- Provide patients with the flexibility to fill prescriptions at multiple locations with fast electronic transfer of patient and prescription data between stores
