

Web Reporting for ANSOS One-Staff™

Analyze key indicators in real time for proactive productivity management

Have you ever been presented with a thick pile of reports that you didn't know how to read, much less use effectively? Productivity data is only as useful as your ability to access, analyze and leverage that data.

The dynamic Web Reporting module provides your facility's executives with a clear, comprehensive presentation of the staffing information collected in the ANSOS One-Staff™ solution. Graphical dashboards turn a wealth of data into a useful performance management tool — helping you analyze key indicators in real time.

Respond to current needs

By providing access to actual workload data, the Web Reporting module helps you make quick assessment of your current needs. Designed to show the complete

picture at a glance, graphical dashboards group reports around key areas such as:

- Cost avoidance
- Hours (FTEs) and costs by summary and trend
- Hours (FTEs) and costs per statistic by summary and trend

Track critical variances

Productivity issues become instantly apparent. You have time to intervene before variances become critical. Each report highlights the positive and negative variances between actual, targeted and budgeted values.

The productivity overview report displays these variances for three specific indicators – work hours per patient, work costs per patient and FTEs – in readable bar graphs.

Benefits

The Web Reporting module helps organizations:

- Gain productivity transparency across the enterprise
- Critically analyze patient care hours and costs associated with workload
- Validate trending and forecast analysis
- Respond quickly to critical variances in actual, targeted and budgeted values

Features

The Web Reporting module includes:

- Automatic scheduled or on-demand data extraction from ANSOS One-Staff
- Real-time graphical assessment of enterprise productivity
- Complete drill-down and historical reporting for detailed analysis and trending
- Fiscal year-to-date reporting
- Trending analysis of productivity data across cost centers
- Comprehensive productivity trending
- Configurable report parameters for specialized reporting groups
- Enhanced security

Drill down to details

The Web Reporting module's hierarchical reporting path allows you to move from the summary level of cross-divisional reporting to the details of shift-by-shift staffing. Complete drill-down functionality helps you pinpoint an area of concern, viewing information from the enterprise, division and area directly through to the shifts worked per staffing level.

Compare and contrast

You can examine current data across disciplines, viewing areas in which workload is measured differently – such as the operating room and ambulatory surgical centers – on one convenient screen. You can analyze data at the most discrete reporting level, because each dashboard links to a variety of supporting detail reports. Also, you can organize reports by hours, costs or FTEs. For presentation, the reports can easily be exported to Microsoft® Excel® spreadsheet software.

Build reporting groups

The Web Reporting module displays trends in productivity data for the fiscal year to date, including 33 drill-down reports, with supporting data elements. In addition to the groups available in ANSOS One-Staff, you can also build reporting groups exclusive to the Web Reporting module — such as the intensive care units across multiple facilities, or by service line.

Enhance your processes

ANSOS One-Staff data is refreshed in real time whenever reports are run, either on demand or according to schedule. Fiscal year configuration allows the Web Reporting module to recognize a variety of your site-specific time frames, from biweekly to the fiscal year, and to calculate costs accordingly. Rolling date ranges incorporate all changes made for a specific pay period.

Customize your security

The Web Reporting module's heightened security provides for a role-based security scheme, with separate user ID and password from the base ANSOS One-Staff application. Your users can change passwords within the web application without intervention. Based upon each user's security access, Web Reporting presents a listing of available reports through a catalog menu.
