*Meet pharmacy demands while enhancing profitability  
and efficiency*

Reduce  
wait times  
with  
Promise  
Time  
Workflow

- ✓ **Meet patient demands**
- ✓ **Enhance profitability**
- ✓ **Improve efficiency**

### The industry leading pharmacy management system that hosts your pharmacy

EnterpriseRx not only hosts your pharmacy data, it centralizes it across all pharmacy locations to provide extensive reporting capabilities for patient programs and business operations. Whether you already have multiple stores or you're looking to expand, EnterpriseRx can do wonders for the health of your business and your patients.

With fully integrated clinical services, EnterpriseRx gives you the ability to choose from a complete suite of pre-configured or custom-built programs to help you provide better patient care.

## EnterpriseRx offers integrated clinical services to help your staff:

- Identify clinical opportunities and build better relationships with your patients through increased communication.
- Document patient interactions and activities.
- Create your own clinical programs or integrate stand-alone programs geared toward your patients' needs to drive healthy outcomes, improve medication adherence and increase pharmacy efficiency.
- Deliver a cost-effective and convenient Med Sync program for your patients to improve medication adherence.

A fully integrated workflow with on-screen queues at each step of the filling process ensures every staff member is delivering prescriptions and services based on promised timeframes for the patient — helping your pharmacy fill more prescriptions per day while spending less time on administrative tasks. All without adding additional staff.

## EnterpriseRx supports:

- Automated refill programs to increase prescription volume while helping patients adhere to their medication regimens.
- Automated calls and text messages that are sent to remind patients to pick up their prescriptions.
- Online refill and web integration that allows patients to submit refills and manage their medication online.
- Seamless integration with McKesson's OneStop Generics program to keep you compliant and decrease prescription costs for your patients.
- Interactive Voice Response (IVR) capabilities with physician specific refill lines and enhanced reporting and playback capabilities. Dial-A-Script® with RxCall™, outbound call features that notify patient's when their prescriptions are ready.

To stay competitive, pharmacies need business intelligence tools to show the value of their patient care, as well as a pharmacy management system that connects them to the continuum of care. EnterpriseRx can help with that too.

## Prepare for the future with:

- HL7 interfaces that populate your centralized database with patient information from other providers. You'll receive HL7 ADT demographic, allergy and medical condition information and you can utilize inbound and outbound RDS for prescription history.
- Advanced business intelligence tools that produce a vast array of reports – giving you the data you need to provide advanced care programs.

EnterpriseRx is the only fully hosted pharmacy management system with integrated workflow and clinical programs that brings scalability to the modern pharmacy owner. It's a great way to keep your business and your patients healthy for years to come.

## Integrated Patient Engagement & Clinical Service

- 1 Clinical Programs Solution (CPS)
- 2 Adherence Performance Solution (APS)
- 3 Patient Communication Solution (PCS)
- 4 Med Sync
- 5 Mobile Delivery
- 6 Intelligent Prior Authorization (IPA)
- 7 Medication Therapy Management

***“Before Promise Time Workflow, I would come in at 8 a.m. and close the pharmacy at 6 p.m., yet I wouldn't be able to leave until 9:30 p.m. I was doing all the prescriptions and refill input as well as all the adjudication work, and I was verifying everything myself. After installing EnterpriseRx, I saw the benefits of a customized, automated workflow”***
