

UNLOCK THE FULL POWER OF GENIUS.

Genius is a feature-rich, future-proof solution that goes beyond payment acceptance. The Genius platform delivers a number of customizable features that give you the most flexibility and scalability.

LINE ITEM DISPLAY

Display items as they are being scanned, a requirement in many states, and eliminate the need for a separate pole display.

SWIPE ANYTIME

Allow customers to swipe their cards while the clerk enters the sale.

SIGNATURE ON DEMAND

Retailers can obtain signatures for non-transactional related situations such as receipt of privacy policy, pharmacist counseling and pseudoephedrine acceptance.

CASH BACK

Fulfill cash back requests and manage less cash-on-hand. You can customize buttons to suggest different amounts and set a maximum cash back limit.

EMERGING TECHNOLOGIES

Accept mobile payments like Apple Pay and Android Pay and without any hardware or software upgrades. Genius is cloud based, allowing businesses to add new features, payment acceptance and functionality over time.

SECURITY

Simplified PCI validation and reduced risk of security breaches through tokenization and encryption. Security features include PCI Compliance, Tokenization, Chip Card (EMV) and Point-to-Point Encryption.

GIFT CARDS

Coming soon with support for various gift card programs.
