

# Consigned Inventory Management

Our consignment team helps provide critical drugs for emergency patients **while helping your facility find relief from upfront cost and inventory loss.**

**Thomas Roush**, MPB Program Manager

Head of MPB Programs and solutions within McKesson Health Systems; leader of MPB's Consignment program, solution innovator through partnerships across enterprise, and expert resource for MPB Programs and Solutions.

**It's our way of caring for your specialty therapeutics, so you can care for your patients.**

As one of the most customer-focused programs available in the market today, McKesson Plasma and Biologics consignment program supports hospitals in managing the capital and inventory of high-cost therapeutics for targeted and rare diseases. We understand your facility's unique patient needs, care specialties and geographic challenges, while our tier-based program effectively mitigates any risks that come from managing these products. From hemophilia products to hyper-immunes and anti-venoms, emergency life-saving drugs are the focus of our attention.

## How it works—

### Step 1:

Place initial order  
Determine your consignment formulary, two-month par levels, and emergency par levels

### Step 2:

Report product usage  
Report product usage to receive replacement product at [mpbconsignment@mckesson.com](mailto:mpbconsignment@mckesson.com)

### Step 3:

Invoice for used inventory  
Billing is created as usage is reported

### Step 4:

Reconcile inventory  
To be completed on a monthly basis

### Step 5:

Manage short-dated inventory  
Inventory within 9 months of expiration is returned to MPB for longer dated inventory.

## Product Readiness

Gain immediate access to plasma products with MPB's consignment program. With a national footprint as well as emergency ordering and delivery options, you'll be prepared when patients need life-saving drugs the most.

## Improved Cost Containment

Through MPB, customers can access WAC, 340B and GPO contracts. By managing par levels at approximately two months of inventory on-hand, MPB reduces carrying costs associated with your teams management of oversupply. Consignment purchase volume applies to total wholesale volume which optimizes McKesson savings.

## Program Support to Avoid Risk

Support is available for order management, returns, inventory reconciliation, billing and 24-hour emergency orders. The MPB team assists your facility with monthly reconciliation by requesting current inventory levels, updating par levels, and sending replacement stock. Our consignment performance dashboard tracks historical usage to ensure on-hand inventory meets appropriate par levels and reduces costs from handling excess inventory.
